FOR THE TREATMENT OF VENOUS LEG ULCERS AND THE REDUCTION OF ASSOCIATED CHRONIC VENOUS OEDEMA (i.e. PATIENTS WITH AN ABPI > 0.8)

- Provides a pressure of 40 mmHg at the ankle
- Helps manage recalcitrant “hard to heal” ulcers
- Improves venous return

UrgoK4/K-Four
Supplied in kits containing bandages:

- Kit size less than 18 cm: 2 K-SOFT, 1 K-LITE, 1 K-PLUS, 1 K0-FLEX
- Kit size 18-25 cm: 1 K-SOFT, 1 K-LITE, 1 K-PLUS, 1 K0-FLEX
- Kit size 25-30 cm: 1 K-SOFT, 1 K-THREEC, 1 K0-FLEX
- Kit size >30 cm: 1 K-SOFT (long), 1 K-PLUS (long), 1 K-THREEC, 1 K0-FLEX (long)

K-SOFT (10cm x 3.5m or 4.5m) / K-LITE (10cm x 4.5m) / K-PLUS (10cm x 8.7m or 10.25m) / K0-FLEX (10cm x 6m or 7m) / K-THREEC (10cm x 7.8m)
**UrgoK4/K-Four**

**DESCRIPTION**
- Gold-standard compression therapy: 4-layer compression bandage system.

**COMPOSITION:**
- Layer 1: **K-SOFT** (sub-compression wadding, viscose, polyester)
  - Allows for even distribution of pressure and helps to protect bony prominences.
  - Non-woven, with a good absorbency and fluid retention, extra resilience and cushioning.
  - Soft, comfortable and washable.
- Layer 2: **K-LITE**: light support bandage type 2 (viscose, polyester, elastane)
  - Base for compression – modern fibre construction offers exceptional comfort and conformability.
  - Knitted with 2-way stretch for excellent conformability
  - Maintains original position with no slippage.
- Layer 3: **K-PLUS**: light support bandage type 3a (viscose, elastane)
  - First compression layer, providing a sub-bandage pressure of up to 20 mmHg at the ankle.
- Layer 4: **KO-FLEX**: cohesive long-stretch bandage (acrylic, cotton, viscose, elastane)
  - Provides “Gold standard” compression therapy
  - Allows for even distribution of pressure and helps to protect bony prominences.
  - Contains low levels of natural latex.

**APPLICATION:**
- Washable and reusable.
- Layer 4 is applied in a spiral up the leg with minimal stretch and 50% overlap from toe to knee. If necessary, KO-FLEX can be torn and applied over the bony prominences to offer extra protection.

**METHOD OF USE**
- Measure the ankle circumference and choose the correct kit accordingly (ankle size 18-25cm, 25-32cm or >30cm+).
- It is preferable to apply the compression system first thing in the morning or after the patient’s legs have been elevated for an hour to minimise any orthostatic oedema.
- In the event of diabetes, heart failure or advanced micro-vascular disease, the compression system may be used with close medical prescribing the bandage system.
- If the ulcer is from rare aetiology (vasculitis, haemopathy, pyoderma gangrenosum etc.) the compression system should only be used following specialist referral.
- If peri-ulcer infectious dermatosis, treat infection before commencing treatment with the compression system.

**INDICATIONS**
- **Urgo K4/K-Four** is indicated for the treatment of venous leg ulcers and the reduction of associated chronic venous oedema (i.e. patients with an ABPI > 0.8).

**PRECAUTIONS**
- Check that the ABPI > 0.8 using Doppler ultrasound before prescribing the bandage system.
- In the event of diabetes, heart failure or advanced micro-vascular disease, the compression system may be used with close medical monitoring following appropriate treatment.
- If peri-ulcer infectious dermatosis, treat infection before commencing treatment with the compression system.
- If the ulcer is from rare aetiology (vasculitis, haemopathy, pyoderma gangrenosum etc.) the compression system should only be used following specialist referral.
- The **UrgoK4/K-Four** kit is designed for single use only.
- Store away from light and heat. K-SOFT and K-LITE are not washable.
- K-PLUS and KO-FLEX may be washed up to 5 times at 40°C – air dry flat.

**CONTRA-INDICATIONS**
- **UrgoK4/K-Four** should not be used on patients who have marked ischaemia or impaired arterial blood supply (ABPI < 0.8). KO-FLEX contains low levels of natural latex.
