LIPIDO-COLLOID CONTACT LAYER
IMPREGNATED WITH SILVER SALTS

Indication: low to moderate exuding wounds at risks/with signs of local infection

- Antibacterial efficacy on a large spectrum of bacteria
- Healing in a moist environment
- Well-tolerated
- Painless and atraumatic removal

Supplied in boxes of individually pouched and sterile dressings, ready to use

Sizes

5 x 5 cm
10 x 12 cm
15 x 15 cm
15 x 20 cm
DESCRIPTION

■ Sterile non-occlusive, non-adhesive, antibacterial lipido-colloid contact layer (issued from the Lipido-Colloid Technology, exclusive patented innovation by Laboratoires Urgo).

COMPOSITION: UrgoTul Ag/Silver is a lipido-colloid dressing made of a polyester mesh impregnated with hydrocolloid particles (carboxymethylcellulose), vaseline particles and silver salts.

METHOD OF STERILIZATION: sterilized by ionizing radiation.

PROPERTIES

■ The silver salts provide a bactericidal effect on most of the microorganisms involved in secondary infection: gram-positive (MRSA, Staphylococcus Aureus...), gram-negative (Pseudomonas Aeruginosa...), and yeasts.

■ In contact with wound exudate, the hydrocolloid particles from UrgoTul Ag/Silver interact with the petroleum jelly component, to form a lipido-colloid gel creating a moist environment favourable to the healing process.

■ The silver ions are maintained in this lipido-colloid gel, providing an antibacterial activity on contact with the wound only.

■ Fatty in its chemical composition, without being greasy to the touch, UrgoTul Ag/Silver does not adhere to the wound or to the surrounding skin. Removal of the dressing is painless and atraumatic for the wound.

■ Flexible and conformable, UrgoTul Ag/Silver is especially suitable for wounds located in awkward areas.

INDICATIONS

■ UrgoTul Ag/Silver is indicated for the local treatment of low to moderate exuding acute wounds (burns, skin abrasions, traumatic wounds...) and chronic wounds (leg ulcers, pressure ulcers...) at risks/with signs of local infection.

METHOD OF USE

■ Cleanse the wound with saline solution.

■ If an antiseptic is first used, rinse the wound thoroughly with saline solution before applying UrgoTul Ag/Silver.

■ Remove the protective transparent films from the dressing.

■ Apply UrgoTul Ag/Silver directly onto the wound. If needed, UrgoTul Ag/Silver can be cut using sterile scissors to match the size of the dressing to the wound.

■ Cover UrgoTul Ag/Silver with a secondary dressing (sterile pad suitable for absorption of exudate).

■ Apply a compression bandage when prescribed.

PRECAUTIONS

■ Treatment with UrgoTul Ag/Silver should be carried out under medical supervision.

■ Concomitant use with other local treatments is not recommended.

■ Avoid contact with electrodes or conducting gels, during electronic measurements (EEG, ECG).

■ UrgoTul Ag/Silver can adhere to latex surgical gloves. Consequently, it is recommended that the gloves be moistened with normal saline in order to make it easier to hold the dressing.

■ Clinicians / Healthcare Professionals should be aware that there are very limited data on prolonged and repeated use of silver containing dressings, particularly in children and neonates.

■ In the absence of any specific clinical data, use in pregnant or breast-feeding women, newborn and premature babies is not recommended.

■ Single-use, individual packaging: re-using a single use dressing may lead to risks of infection.

■ Do not re-sterilise

CONTRA-INDICATIONS

■ Known sensitisation to silver and other ingredients of the dressing

■ Do not use on patients undergoing Magnetic Resonance Imaging (MRI) examination.
